DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 2-10, drawn to a integer based multiplier circuit, finite field $GF(2^m)$ multiplier circuit separated from the integer based multiplier circuit and a selector to select one of the integer and finite field circuits and a full adder propagating a carry upon selection of an integer-based unit arithmetic operation and not propagating the carry upon selection of a finite field-based unit operation, classified in class 380, subclass 37.
 - II. Claims 11-19, drawn to an arithmetic unit module configured to perform one of an integer unit arithmetic operation and a finite field based arithmetic operation and a controller module to divide processing into polynomial multiply processing and modulo processing, classified in class 708, subclass 603.
2. The inventions are independent or distinct, each from the other because:
3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination of group I has separate utility such as performing encryption using both a finite field and integer based arithmetic operations, not requiring dividing the processing of modular multiplication into polynomial multiply processing and modulo processing. See MPEP § 806.05(d).

Art Unit: 2134

4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103 (a) of the other invention.
